**Vascular and Endovascular Surgery**

This four-day course provides an in-depth review of the specialty of vascular surgery. This will be the 30th year of offering an in-depth review for those preparing to take the vascular board examinations as well as providing the basic didactic education for the vascular residents in training. The course recognizes four major pillars of vascular surgery practice, which include (1) conventional open operations, (2) catheter-based intervention (endovascular surgery), (3) the medical aspects of patient management, (4) diagnostic imaging and noninvasive testing. An internationally recognized faculty will present a comprehensive survey of generally accepted views, including basic science, pathogenesis, diagnosis, and management of the broad spectrum of vascular disorders. In addition, each speaker has been asked to take a portion of their allotted time in order to review the important new developments, as related to their topic that have taken place within the last year. We have also requested that each speaker begin or end their presentation with 2-3 questions appropriate to their topic.

In recognition of the increasingly important role of endovascular intervention in the vascular surgeon’s practice, we continue to add topics that provide an update on endovascular surgery together with interactive case presentations involving those techniques.

This course addresses the needs of practicing vascular surgeons who wish to review the specialty and update their knowledge of new topics in this rapidly expanding field. In addition, vascular surgery residents will find this course a comprehensive overview of the subject that is designed to supplement their training and to provide a foundation of basic science necessary for their complete understanding of the subject. It conforms to the clinical and basic science curriculum as outlined by the vascular surgery program directors (APDVS).

The course is supported by a textbook in vascular surgery. The chapters have been written by the course faculty. Participants attending this course will receive a copy of the textbook, *Vascular and Endovascular Surgery: A Comprehensive Review*, edited by Wesley S. Moore, MD.

Disclosure Statement
The FDA has issued a concept paper which classifies commercial support of scientific and educational programs as promotional unless it can be affirmed that the program is “truly independent” and free of commercial influence. In addition to independence, the FDA requires that non-promotional, commercially supported education be objective, balanced, and scientifically rigorous. The policy further states that all potential conflicts of interest of the CME staff and faculty be fully disclosed to the program’s participants. In addition, Accreditation Council for Continuing Medical Education policy now mandates that the provider adequately manages all identified potential conflicts of interest prior to the program. We, at UCLA, fully endorse the letter and spirit of these concepts.
